Module 4: SRS & PRD Document

Centralized Admin Control Tower & Governance Architecture

> **Module Name:** Admin Management System
> **Document Type:** Combined SRS & PRD
> **Target Platform:** Web Application (React / Next.js)
> **Version:** v2.1 Final

1. EXECUTIVE SUMMARY & SCOPE

The Centralized Admin Dashboard acts as the primary administrative control unit. It provides overall oversight over Student, Driver, and Teacher dashboards, handles complaint resolution, inspects bus rosters down to specific passenger lists, and manages teacher emergency coverage.

2. COMPLAINT RESOLUTION WORKFLOW ENGINE

Inward complaints from all three sub-dashboards land in the Admin Complaint Ingestion Engine.

- **Mandatory Resolution Message:** Upon clicking "Resolve", the system attaches the standard message: *"Your query has been resolved."* (Admin can append additional commentary).
- **Status Dispatch:** Ticket status moves to `RESOLVED` and triggers a real-time notification push to the originating user.

```
[ Ingest Ticket from Student / Driver / Teacher ] | [ Render in Admin Queue ] | Admin Clicks "Resolve
```

3. BUS & ROSTER MANAGEMENT (BUSES 1 TO 7)

Displays individual cards for Bus 1, Bus 2, Bus 3... Bus 7. Clicking a bus card opens a detail view with:

Category	Details Displayed	Admin Action Capability
Driver Info	Driver Name, Phone, License Number, RC Document state.	Reassign driver or initiate direct call.
Boarding Teachers	List of assigned teachers, department, and stop locations.	Reassign teacher duties dynamically.
Boarding Students	List of assigned students, USN, stop, and cutoff check-in state.	Manual check-in override if required.

4. TEACHER WORK REASSIGNMENT CONTROL

When a teacher sends a delay/absence alert via the chat channel, the Admin uses the **Coverage Reassignment Tool** to query available teachers and assign substitute coverage instantly.
